A **Senior Operations Leader** with in-depth expertise on Plant Management, still directing all areas of an organization such as market development, suppliers/authorities' liaising, project management, production and supply chain. Being challenged daily on all above, I have found the nodal point where a business should be injected by innovative and strategic thinking, yet based on solid process implementation and compliance to standards. Thus, my arsenal is empowered by abilities of strong and fair leadership, where I don't hesitate to encounter crises and responsibilities at hand, while taking firm decisions that would end up serving the BoD's and/or management's objectives.
